READY, AIM, FIRE!

PT 109 FROM MIRCO GAMES

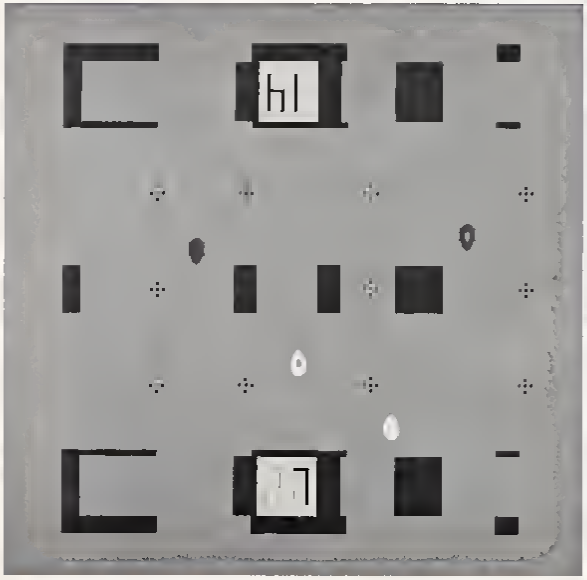
The new 2-4 player video game that puts you ON TARGET for higher profits.

All-out war on the high seas! MIRCO's PT-109 packs more firepower than the Pacific Fleet. As a 2-player game, PT-109 is a matchup of swift, highly maneuverable torpedo-firing PT-boats. *Three-speed forward and 1-speed reverse drive* propels boats around islands, sea mines and other hazards. And develops inertia to test navigating skills.

But a torpedo is limited by range and natural barriers, so MIRCO adds a 4-player option—*Battleships!* Larger, slower, twice as deadly. With howitzers that can blast over island tree tops. Now there's no place to hide. Each torpedo boat/battleship team must outmaneuver the enemy—or sink!

- **Special effects.** A complete arsenal, in quad sound. From the whoosh of torpedos to the grinding of steel hulls. Engine rumblings, booming cannons, screaming shells and explosive direct hits. All the realism players ask for.
- **Computerized random selection.** Insures that a sinking ship resurfaces in a new, unknown location. No sitting ducks, more challenging play.
- **Screen interface.** Produces sharp, crisp images to allow precision aim. Torpedos and shells home-in on targets with lethal accuracy.
- **360° killing radius.** No "dead spots" on the screen. Players are limited only by the range and characteristics of their weapons. Aim--not the whims of the machine—is the critical factor.
- **Pre-game show.** Video display of PT-boats circling islands, minefields.
- **Top-mounted controls.** For smooth, concise navigation and firing.

PT 109



is an operator's dream:

- **Microcomputer controlled.** Cabinet top flips open, sides drop to expose conveniently located printed circuit boards. Pull out one, pop in another. Ease of replacement means less down time—*much* less.
- **Fully fused.** All components are protected against overheating.
- **Built-in monitor props.** Elevate the video unit to a comfortable working height, slip in monitor props and perform control adjustments. The cure for maintenance migraines.
- **Large cashbox.** Optional coin counter.
- **Playing time.** Operator controlled. Set for 1, 2 or 3 minutes.
- **Cabinet.** Cocktail table design, wood-grained, heavy-duty formica. Birchwood-ply construction in all areas of stress.
- **Playfield.** Tempered glass laminated to plexiglass. Prevents leakage from spilled beverage.
- **Controls.** MIRCO designed control mechanisms are superior to potentiometers. Insure reliability and a long playing life.

PT-109—the latest in the MIRCO generation of video games. For information on how PT-109 can brighten your profit picture, call or write:
